The Honorable Mitch McConnell  
Majority Leader  
United States Senate  
Washington, D.C. 20510

The Honorable Nancy Pelosi  
Speaker  
U.S. House of Representatives  
Washington, D.C. 20515

The Honorable Chuck Schumer  
Minority Leader  
United States Senate  
Washington, D.C. 20510

The Honorable Kevin McCarthy  
Minority Leader  
U.S. House of Representatives  
Washington, D.C. 20515

Dear Speaker Pelosi, Majority Leader McConnell, Minority Leader Schumer and Minority Leader McCarthy:

We write today urging your support for the attached economic stimulus proposal for using public-private partnerships to spur investment of more than \$100 billion to upgrade critical public facilities to improve their safety, energy efficiency, resilience, and flexibility.

This proposal would not only generate significant return on investment from limited initial public funding, it would quickly put thousands of people back to work – mostly in construction, engineering, and manufacturing – by giving businesses the confidence they need to invest and hire, particularly in the energy efficiency sector, which has seen more than 413,000 jobs lost since the pandemic began. It would also deliver a fleet of updated mission critical public facilities such as hospitals, schools, military campuses, airports, and municipal buildings that have sharply reduced operating costs and are far better prepared to handle disasters in the future. The federal investment adds resiliency and flexibility measures to each project, such as making windows storm resistant and putting HVAC equipment on the roof to prepare for hurricanes.

Specifically, we propose federal appropriations of \$22 billion over five years to retrofit these facilities. The federal funding – along with energy cost savings from efficiency improvements – would leverage an estimated private investment of \$88 billion to deliver a total of \$110 billion in economic activity.

The guiding principle is to build back better, not to simply replace failed building systems and components. The proposal paves the way to do so by utilizing performance contracting and performance-based service contracts that – using legislative authority that exists at the federal level and in every state – can leverage \$4 of private spending for every \$1 in public funding. The private 80% investment finances the majority of the project and is repaid over time utilizing savings from improved energy efficiency and reduced operating costs.

Funding would largely flow to state and local government facilities through the State Energy Program, with some funding moving through other authorized programs for federal projects including military and other federal facilities and public housing.

The need for these projects is well documented. We have allowed our critical public facilities to fall into disrepair, with an estimated maintenance backlog of \$1 trillion. We can begin to address this backlog and failing public facility infrastructure if we wisely combine federal dollars with much private-sector investment. Meanwhile, the COVID-19 crisis has demonstrated why modernized facilities are so badly needed to better manage public health crises and other disasters.

Thank you for your consideration, and please don't hesitate to contact Tim Unruh at NAESCO ([Timothy.Unruh@naesco.org](mailto:Timothy.Unruh@naesco.org)), Ben Evans at the Alliance to Save Energy ([bevans@ase.org](mailto:bevans@ase.org)), or Jennifer Schafer ([jasca@cascadeassociates.net](mailto:jasca@cascadeassociates.net)) at the Federal Performance Contracting Coalition with any questions or for more information.

Sincerely,
